# Here's how we are keeping our design industry **happy & satisfied**

When people are going to make a purchase or invest money in a product, they expect to know how others feel about their decisions who have made the same investments or purchases.

Just think about it for a moment, how often do you rely on your friends' advice when it's about making choices. Recruitment officers want references and recommendations from previous employers before hiring new employees.

People want to know a friend's experiences of buying a house before choosing a place to live in. Similarly, companies want to know about user experiences with tools they are going to be using.

> Nowadays, everyone is looking for innovative all-in-one productivity tools to make their company shine with success.

We were fortunate enough to have such amazing clientele over the past few years, who have shared their honest opinion with us about what they loved about the Staff timer app.

Just Braggin' and Proud

This short testimonial report is going to help our future prospects who are managing design agencies and considering to use productivity tools while working from homes.

We are excited to share some of the experiences of our users and their enthusiasm behind it.

Design and Expectations

As a designer, videographer or animator, an important part of their role is to find new ways to improve the relationship between their own Agile processes, clients' requirements, and the moving target that is design best practice.

These relationships vary from project to project, but the need for effective and engaging user experience is constant.
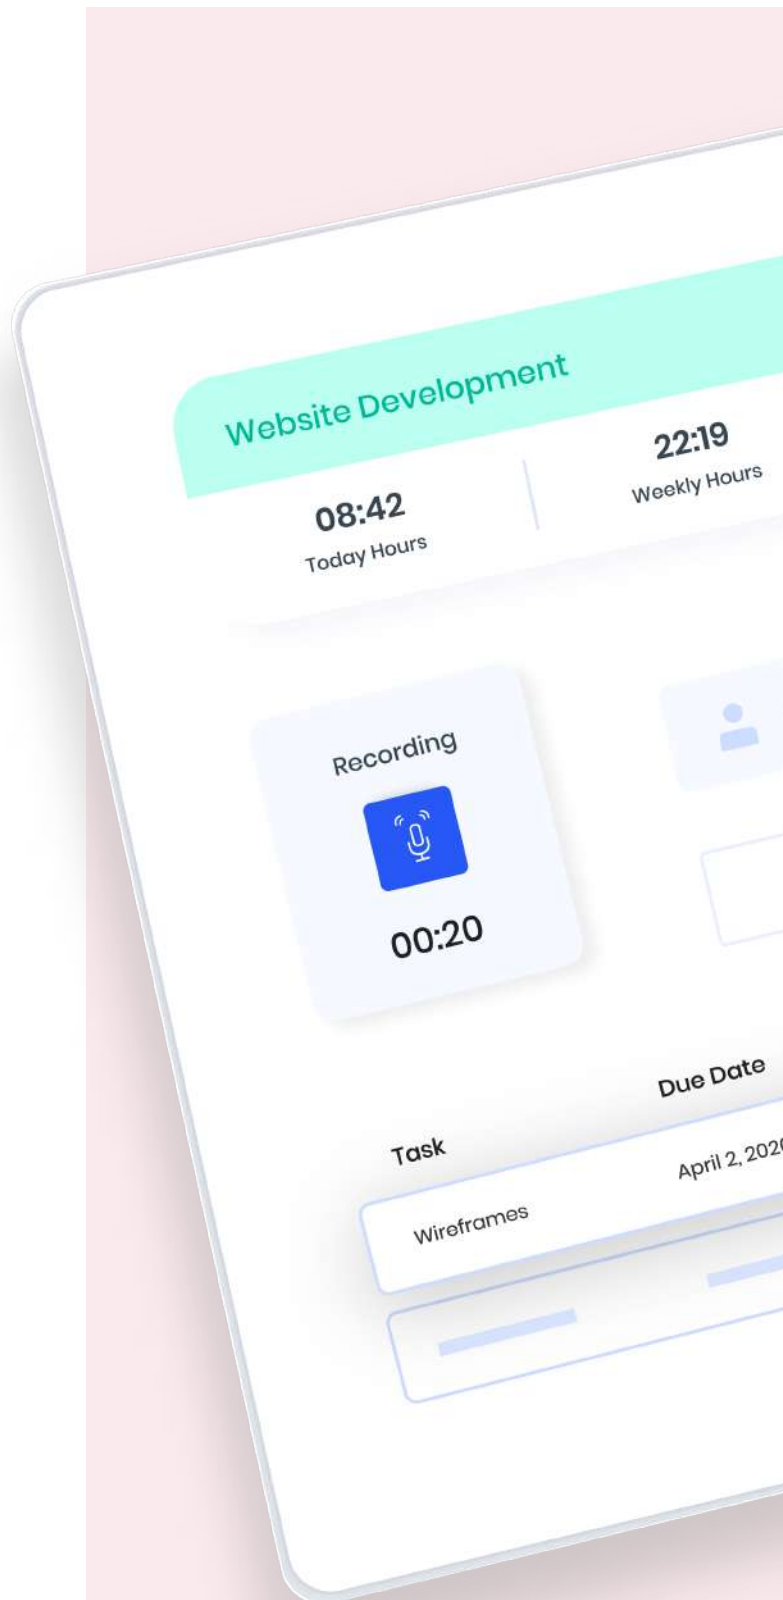

> Trying to balance effective user-based solutions within the budget of all projects is a continual challenge.

Having said this, it is the designer's responsibility to deliver the best possible user experience on time and within budget. While working in an agile environment on different projects, tracking where they are spending their time can be eye-opening.

Staff timer app helps designers to track time spent on managing all design work.

Tracks all design work automatically

Staff timer app works automatically, so it tracks all my data in the form of tasks without interrupting my day as every minute is accounted for.

Mathew Oscar
Freelancer

Helps balance UI/UX design workflow

Staff timer app helps me determine the order of dealing with each project task according to its relative importance. From research, low fidelity wireframes, layouts, and prototypes, to iterations and testing. This helps me rearrange their priorities to ensure everything is given that it deserves.

Iqra Tahir
UX/UIDesigner

No More wasting productive hours

The Staff timer app not only helps me to track time spent in departmental or customer meetings but also I can manage all my design projects effectively. This all is done automatically by the Staff Timer App's back office without wasting productive hours on tracking time manually.

Hannah Wilde
Motion Designer

Boosts team productivity and collaborations

As a product designer, the Staff timer app helps me to manage the team's workload, allocate resources intelligently, and avoid burnout. It shows exactly who has too much work, who needs support, and who has capacity for a bit more.

Umair Z.
Creative Director

Avoid design projects to go over budget

Staff timer app gives insights of work done for design projects so that we as a team avoid going over budget. I can track my billable time designing and altering projects, or for managing a mess of design files by logging tasks for each and every activity through a desktop app.

Noor Khalid
Product Designer

Captures all billable and productive hours

As a designer, frequently working on multiple projects at a time makes it difficult to remember everything worked on. Staff Timer app provides an opportunity to track every billable hour of a chaotic and irregular working day. It will log all the work activity in one place.
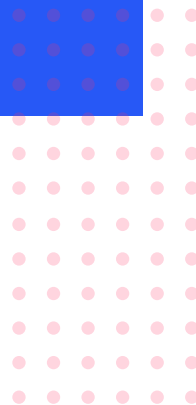

George Oliver
Web Designer

Introducing
Staff Timer App

Staff timer app is a web-based task tracking application for remote and in house teams that have proven to increase their employee productivity by 70% within weeks of using it.

This software allows you to see exactly where your time was spent to increase and analyze overall productivity. Get set up in just a few minutes and instantly start tracking your task, projects, and billable hours.

> "
> Staff Timer App is one of the most intelligent project tracking software in the market.
